DETAILED ACTION

In response to the amendments filed on 12/01/09, no claims have been amended. Claims 2, 4-7, 9 and 10 are pending in the current application.

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

2. Claims 2, 4-7 and 9-10 are allowed.

3. The following is an examiner's statement of reasons for allowance:

4. The instant invention is directed towards a computer program product stored on a computer readable medium, for causing a computer system to execute processing for predetermining whether or not the bullets that are virtually fired in response to an input operation of a player collide with an enemy-character that is computer-controlled, and processing for displaying a player-character and the enemy-character in a virtual space viewed from a virtual viewpoint on a screen. The instant invention provides a computer method to provide visual effects that change the time scale such that a display speed of at least the enemy-character and each one of the bullets fired from the enemy-character become slower when the visual effect request about the time scale is input, wherein the time scale changes regardless of whether the bullets fired hit a target. The time effect comprises of the following operations: d) determining whether or not bullets that are virtually fired in response to an input operation of the player collide with the enemy-character being a shooting target or collide with bullets that are virtually fired from the enemy-character and are shooting targets; e) displaying an image of the shooting

target being shot on the screen when bullets that are virtually fired responding to an input operation of the player collide-with the shooting target; .f) displaying a remaining time for the computer system to execute the changing of the time scale on the screen; g) decreasing the remaining time in proportion to an elapsed time in which the computer system executes the changing of the time scale; h) determining whether or not the remaining time is over; i) terminating the changing of the time scale when the time is over; j) restoring the time scale to a normal value; k) measuring an elapsed time in which the computer system does not execute the changing of the time scale; and l) increasing the remaining time in proportion to the elapsed time in which the computer system does not execute the changing of the time scale.

5. The prior art of Satsukawa and Kami teach the elements of the instant invention but do not fairly teach or suggest the time shifting element as detailed in the description above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
